

Attention Residents

Back flow Prevention

By state law it is the responsibility of each user of the Leamington culinary water system. To have (anti siphon) back flow prevention on all systems. To prevent any contamination of the culinary water system all homes/outside taps/sprinkler systems/faucets shall be equipped with a anti siphon device. Which can be found at any plumbing supply store. If these devices are not in place there is a risk of contamination to the system. Lets all do our part to protect our drinking water, it is required by State Law.

Fire Hose Law

It has been brought to the attention of the town board at our most recent fire. Local residents ran over the charged fire hose. The Sheriffs office contacted the town. They said the next time the fire hoses are ran over the law will be enforced. In the future please let the fire fighters do there job. Stay out of there way and do not run over there hoses. Our fire fighters are volunteers that are trained on how to fight a fire safely. So in the future please respect what they are willing to do for the town.
